 2) Corresponds to the peak inrush current on initial actuation (cold filament).
 3) The load wiring diagrams are listed below:

- 4) The load in the table excludes flasher. When applied in flasher, please connect by the polarity request according diagram 3, a special silver alloy contact material should be used and the customer special code should be (170) as a suffix.
 5) Loads mentioned in this chart is for relays with no parallel diode or Zener Diode. For those with parallel diode, Zener Diode or other components, please contact Hongfa for more technical supports.
 Please also contact Hongfa if the actual application load is different from what mentioned above.

CHARACTERISTIC CURVES

1. Coil operating voltage range

- 1) The operating voltage is connected with coil pre-energized time and voltage. After pre-energized, the operating voltage will increase.
- 2) The maximum allowable coil temperature is 180°C. For the coil temperature rise which is measured by resistance is average value, we recommend the coil temperature should be below 170°C under the different application ambient, different coil voltage and different load etc.
- 3) If the actual operating coil voltage is out of the specified range, please contact Hongfa for further details.

2. Load limit curve

- 1) The load and electrical endurance tests are made according to "CONTACT DATA" parameters' table. If actual load voltage, current, or operate frequency is different from "CONTACT DATA" table, please arrange corresponding tests for confirmation.

3. Ambient temperature curve of the electrical endurance test

- 1) The minimum temperature is -40°C.
- 2) The maximum temperature is 125°C.
